

Test Plan

Setup

Please have OBS running AFTER you start the program, and please focus OBS on that screen only.

Open up a word processor of your choice that make reasonable .doc, .docx, .odt, or .pdf files.

Record the time you started your testing session.

Your testing session includes both the testing of your software and answering the test plan questions.

To access the executable files, go to [Prototype7022\bin\Debug\netcoreapp3.1](#) and click on [Prototype7022.exe](#).

Navigation

Try to complete the following tasks:

- Create a new game. *(Character creation doesn't work yet.)*
- Load a game. *(Save files don't function yet. Loading should take you to the overworld.)*
- Go to the pause menu in the overworld.
- Save a game. *(Save files don't function yet, and visual feedback is lacking.)*
- Fight an enemy. *(You can't use specific items or moves yet.)*
- Run from a fight.
- Buy something from the shop. *(Visual feedback is lacking.)*

Questionnaire

After completing these tasks, please answer the following questions in a separate document:

- Does the interface look clean and simple?
- Would you be able to use this interface for an hour or more?
- Is menu navigation straightforward?
- Are there any features that you think could be added to this program?
- What is the most confusing part of navigating the interface?
- Do you have any other comments about this program?

Delivery

Record your age and whatever name you would like your testing session to be recorded under. I need your age because this is entertainment software – you don't see 20-year-olds playing Jewel Quest these days. I do NOT need your exact date of birth, and I'd rather not have it.

Record the time you ended your testing session.

Please submit everything in a word document of the file extensions .doc, .docx, .odt, or .pdf. Any of these formats would be acceptable.
